

Windows 7: Finally, Microsoft gets it right.

Dear Sarah,

On October 22, companies will finally have an alternative to the aging Windows XP operating system released in 2001. Windows Vista, the successor to Windows XP, was perceived by many as a bloated product plagued with numerous initial problems. Due to these issues, many companies avoided upgrading to Vista. Windows 7 is a significant improvement.

What is new in Windows 7?

Some new benefits of Windows 7 include:

- **Speed:** Windows 7 runs faster than Vista and works better on lower power computers.
- **Compatibility:** Works with more third party hardware and software.
- **Ease of Use:** Better navigation and easier access to important programs right from the taskbar.
- **Organization:** Easier and improved file organization

Questions to ask before upgrading:

- What are my business goals? Will upgrading help me to accomplish them?
- Is my current hardware compatible?
- Should I upgrade now, or wait until the "bugs" are worked out?
- Should I upgrade or should I start with a new PC or installation?
- How much will it all cost, and will it impact or improve my productivity?

Need help figuring it all out? We can help.

Try the OfficeCare Windows 7 GAP Analysis!

The OfficeCare Windows 7 GAP Analysis is a quick, low-cost assessment designed to identify:

1. Should I upgrade to Windows 7? When?
2. Is my current hardware compatible?
3. Will Windows 7 help my company save money or increase productivity?
4. What are the "gotchas" that I need to look out for?
5. How much money will it cost?
